## Opera Solutions Joins Google's Cloud Transformation Program

There is a massive flow of the world's information available to us every moment. Yet, sometimes we don't always know what we don't know and we miss the story the information is telling us. This is about to change.

Today, Opera Solutions is excited to join Google's Cloud Transformation Program. By joining the program, Opera Solutions will help enterprise customers build business solutions that offer a key to the information they need, built on the computing power, scalability, and security of Google's cloud services.

The Cloud Transformation Program highlights Google partners who have expertise and a proven track record of success helping businesses make the most of their IT investments. As a member of the Cloud Transformation Program, Opera Solutions will train its employees on Google's cloud services, with support from Google.

As Chief Executive Officer and Founder of Opera Solutions Arnab Gupta notes, "Working with Google will allow Opera Solutions to bring its demonstrated expertise in turning Big Data into Small Data to a broader group of organizations – finding the meaningful, actionable information hidden in massive data flows and transforming it into profit-enhancing recommendations and programs for customers. We look forward to working with this broader group of enterprises to use their information in an innovative way."

As part of the program, Opera Solutions will provide advanced industry and project specific analytics driven capabilities like lead scoring, recommender engines, anomaly detection applications, and more. This will offer businesses a new way to use information to drive increased profitability through deeper customer knowledge and engagement.

Through its participation in the Cloud Transformation Program, Opera Solutions will take advantage of Google's Infrastructure-as-a-Service (IaaS) offerings, including Google App Engine, Google Storage for Developers, Google Apps Script, and Google Prediction API.

"We're very happy to have Opera Solutions as part of the Cloud Transformation Program," said Rahul Sood, Google's Global Head of Enterprise Partnerships. "We're excited to work with Opera Solutions to help enterprise customers build and use predictive analytics, all hosted on Google's cloud infrastructure. Opera Solutions has a great record of delivering analytic solutions that help enterprise customers grow their businesses."
